

Shield Docs Deals

Facilitate M&A and due diligence processes with confidence

With business transactions attracting diverse groups of prospective buyers or investors from remote and diverse locations, sensitive deals are exposed to greater security risks. There is always a chance your commercially sensitive information could fall into the wrong hands jeopardising your deal, neutralising your competitive edge or tarnishing your reputation.

Shield Docs 'Deals' eliminates these risks and offers the perfect equilibrium between data security and freedom of information, simplifying sell-side processes and allowing deal teams to securely facilitate M&A transactions and due diligence exercises with complete manoeuvrability and confidence.

The Right Balance – Sellers and their deal teams need a data room solution that is highly secure and provides complete transparency & control over transaction documents. Shield Docs 'Deals' strikes the perfect balance, providing layered security with enhanced productivity and intelligence features to facilitate safer, smarter and more efficient deal management in the cloud.

Deal Insights – Shield Docs 'Deals' provides valuable data-driven insights that give your business the competitive edge in any negotiation. With an intuitive, productivity-focused interface and a powerful Q&A function, our 'Deals' solution helps deal teams determine likely buyers and pre-empt any objections. Built-in collaboration features allow online co-editing and tracking of documents, streamlining the process of contract negotiations.

Unparalleled Security – Beneath the efficient, team-orientated functionality sits a robust audit and forensics engine to ensure the integrity of the negotiation process. Full transparency over user behaviour ensures irregular behaviour is detected - if unauthorised access or sharing of sensitive data is discovered, documents can be remotely eradicated using digital fingerprint technology. Deal teams can also rescind access to transaction documents for unsuccessful bidders at the completion of a sale.

Trusted workspaces transforming business
